THE NO MANUALS APPROACH TO SOFTWARE DESIGN

Many organizations spend years looking for the ideal "all inclusive" ERP system that will provide their organization with information, productivity and answers to their core business issues.

These ERP applications require significant resources for deployment and customization. Another key factor with any application installation is the significant hardware and IT support required to successfully launch these systems. Organizations also need to look at the tangible time required for their staff to master the application as ERP systems typically carry a 6-18 month learning curve. Add on top of this the time and cost of file conversions and it is no wonder why any CEO, CFO or other manager dreads pulling the plug on their old system. From my own experiences, I have seen in the past where organizations profitability was adversely impacted through the implementation of a new software application.

The results after costly implementation expenses and exhaustive amounts of time installing a new ERP system is that users can become frustrated while systems become underutilized. Additionally, training and sharing informational resources become a whole new challenge to the organization as many users that were typically "power users" on the old system are now less effective as they go through the "learning curve" on the new system.

It is this pain and suffering that Simplistic Solution takes out of the implementation equation!

 Simplistic Solution Hits the Bull's-Eye!

Simplistic Solution provides organizations with focused solutions to your common business issues. From time management solutions to assisting your detailing or sales force with an automated mobile order management system, we have the ability to extend the useful life of your existing ERP system… And we do it painlessly and cost effectively.

Through our vast experiences over the course of the past 25 years, we have found that the common thread with many application designs is the complicated nature of design and difficulty of implementation. Not to mention the significant associated costs with these activities.

What the "No Manuals Necessary" approach means:

1. Simple and effective implementation of the system. From one manager to several hundred around the world. We allow you to vertically integrate our applications rapidly.
2. Intuitive design means little to no training is required for your staff. That also makes your associates "Super Users" on day one of use. There is no learning curve with our applications.
3. No capital costs for system purchases. Our applications run on mobile devices and PC's and there are no special requirements other than internet access to our web portals.
4. We manage your database and handle upgrades and system enhancements free of charge.
5. System costs are nominal, typically pennies per labor hour as we bill a monthly usage fee.

Our key point of difference is our exclusive service guarantee and our free consultative approach to system implementation. This guarantees your organizations overall success!
